

How to Set Up Contact Form Widgets in WordPress

Summary

This user guide is a step-by-step for using Konfirmi in WordPress

Overview

- Install Konfirmi on WordPress
- Create a Konfirmi Widget
- Create a Contact Form
 - Caldera Forms
 - Contact Form 7
 - Gravity Forms
 - Ninja Forms
 - WooCommerce Forms

Getting Started

1. First, you'll need to make sure the Konfirmi plug-in is installed in your WordPress site. Log in to your WordPress Site to begin. Then, hover over "Plugins" and select "Add New."

2. Next, search for "Konfirmi" in the search bar on the right.

3. Install the widget
4. You can now see that Konfirmi was successfully installed and activated.

| <input type="checkbox"/> | Plugin | Description |
|-------------------------------------|---|--|
| <input checked="" type="checkbox"/> | Konfirmi Plugin Deactivate Settings | Konfirmi Plugin Version 1.0.0 By KONFIRMI LLC Visit plugin site |
| <input type="checkbox"/> | Plugin | Description |

Creating a Widget with Konfirmi

1. First, log in to your Konfirmi account, or create a new account if you have not done so already. Select “+ CREATE NEW WIDGET” in the bottom right of the dashboard

2. Select how you would like the Konfirmi Widget to appear on your WordPress website.

3. Select the verification fields you wish to verify your customers with.

4. Select the verification method you wish to implement on your WordPress website. You can select any of the methods listed below. However, you should at least to active “Info checks” or “Email or cell phone” if you are implementing a contact form to verify the user.

Verification options

Select which verifications methods you want to use

- Single Sign On (SSO)
- Info checks (Knowledge Based Authentication)
- Email or cell phone (Two Factor Authentication)
- Facial/ID images
- Video selfies

5. Click “+ ADD NEW” and enter your domain or IP address

Widget Domains and IP Addresses + ADD NEW

Provide domains or IP addresses for widget to be used on

Enter Your Domain or IP Address Here!

For security purposes, your website must be configured to use an SSL certificate. Please enter "https://" before the IP address or domain name of your website (e.g., https://konfirmi.com).

6. Assign the number of data checks you would like to use for this widget. For this example, we are going to use 50 of our 100 data checks we have available.

Assign Widget Data Checks + BUY MORE CHECKS

Remaining total data checks count: 50

Number of data checks assigned to this widget

50

7. Select how you would like this widget to import information from WordPress contact forms. Konfirmi supports Contact form 7, Gravity Forms and Ninja Forms.

WordPress Contact Form

Would you like this widget to import information from WordPress contact forms?
(We support Contact Form 7, Gravity Forms, and Ninja Forms)

Yes
 No

WooCommerce

Would you like this widget to import information from WooCommerce?

Yes
 No

8. Once you've created your widget, all that's left to do is to save and copy the widget code and paste into your website. If you are unfamiliar with how to do this, there's a "How to use" feature in the top right corner of the widget box. We will also provide a step-by-step below.

Widget Code

Copy widget code to your site [How to use](#)

Widget Code

```
<script>(()=>{let d=document,i=e=d.createElement("script"),e.src="https://dev-api.konfirmi.com/static/konfirmi-script.min.js";d.body.appendChild(e);i=d.createElement("img").i.src="https://dev-api.konfirmi.com/form/jokj0qakbe2ba4a66bfab1ff6898867144ee3e17/get-button-background";i.style.cursor="pointer";i.onerror=()=>i.style.display="none";i.onclick=()=>window.open("https://dev-api.konfirmi.com/form/jokj0qakbe2ba4a66bfab1ff6898867144ee3e17";"Konfirmi","width=650,height=350");d.getElementById("konfirmi-container").appendChild(i)});</script>
```

PREVIEW SAVE SAVE + COPY WIDGET CODE TO CLIPBOARD

9. Select "How to use." A pop-up modal will appear with instructions on how to create and configure a widget, insert it to your webpage and validate a widget response.

Create and configure widget

- Create a new widget by using the "Create New Widget" button
- Configure the widget to be added to a domain you own or control
- Copy the widget code that appears at the bottom of the widget configuration settings

Inserting to your webpage

- On your webpage add a `<div id="konfirmi-container"></div>` tag where you want widget to be loaded
- Insert the generated widget code before the closing `</body>` tag in your webpage.

Validating widget response

- After your user successfully passes all the verification steps in the widget, you have to send an API GET request to the `https://dev-api.konfirmi.com/api/result/{{token}}` endpoint to validate the verification process. Here, `{{token}}` is the token that gets returned to the hidden input next to the widget `<iframe>` tag.
- In response, you will get a JSON like this: `{data: true}` indicating whether the confirmation process was successful or not.

OK

10. When you return to the Konfirmi dashboard, you can now see the widget you created appear in the Konfirmi dashboard.

Widgets [+ CREATE NEW WIDGET](#)

| Sitekey | Domains and IP Addresses | Photos/Videos | Data checks | Actions |
